News – draft international study

VTT research centre, Finland, and University of Thessaly, Greece

The report includes
• case studies of the fifteen pre-defined questions.
• documentation from the workshop 23rd of April in Örebro.
• conclusions of the international study.

Confirms the first literature study (LTU) – no single solution, stakeholder participation, clear leadership, communication, agreements.

Interesting distinction between geographical and business based corridor development, and their specific features.

Report in basecamp – for you to comment until 31st of May.
