“We are neither living nor dying, we are something in between”

Since the beginning of history, the living and the dead have been separated. This has made it almost impossible to co-live together under one roof. We, 'the living', have even created "deathscapes" which has set a clear boundary between us and them, 'the dead'. In every society, with its own cultural norms and rituals, they act with the dead in their own way - some are buried, others are burnt, but what is common across all societies is that they are not evident in our lives anymore. Looking at it from an urban perspective, the dead occupy a big patch of land in every city. This acts as a burden, as it makes "forbidden spaces" where the living are not able to be part of it.

However, in each topic, there is a lesson that can be learned from it. In this case, it's a 6km stretch informally and formally built, with a rich history and poor squatters who have no choice except to dwell with the dead.. This is City of the Dead, located in Cairo, Egypt. The extreme lack of housing has pushed a part of society to live informally in cemeteries, where they have learnt to co-live in the same room as the dead; they've embraced the idea of sleeping next to the dead, working and playing on those deathscapes.

But ever since the government announced that they will demolish those deathscapes as a part of demolishing all informal settlements in Cairo, the time has come to make a stand against this decision, instead learning from their "life hack" and applying it throughout the City of the Dead – creating as society where the dead and living are not separated, maximizing the lost potentials in cases such as City of the Dead and making them not looked down upon and marginalized. This thesis aims to design the city and improve the lives of people living in these cemeteries, dealing with each case with care and compassion.

Understanding History

Political Landscape + Showing Power + Mass imigrations shaped city of the dead

Cairo city edge during the 7th Century

Death of Imam Al-Shafie

Building Imam Al-Shafie a historic mausoleum for praying and remembrance on the city's edge

Fatimids conquered Egypt between 10th - 12th century, stated "Cairo" a capital, built new mauseloums for themselves

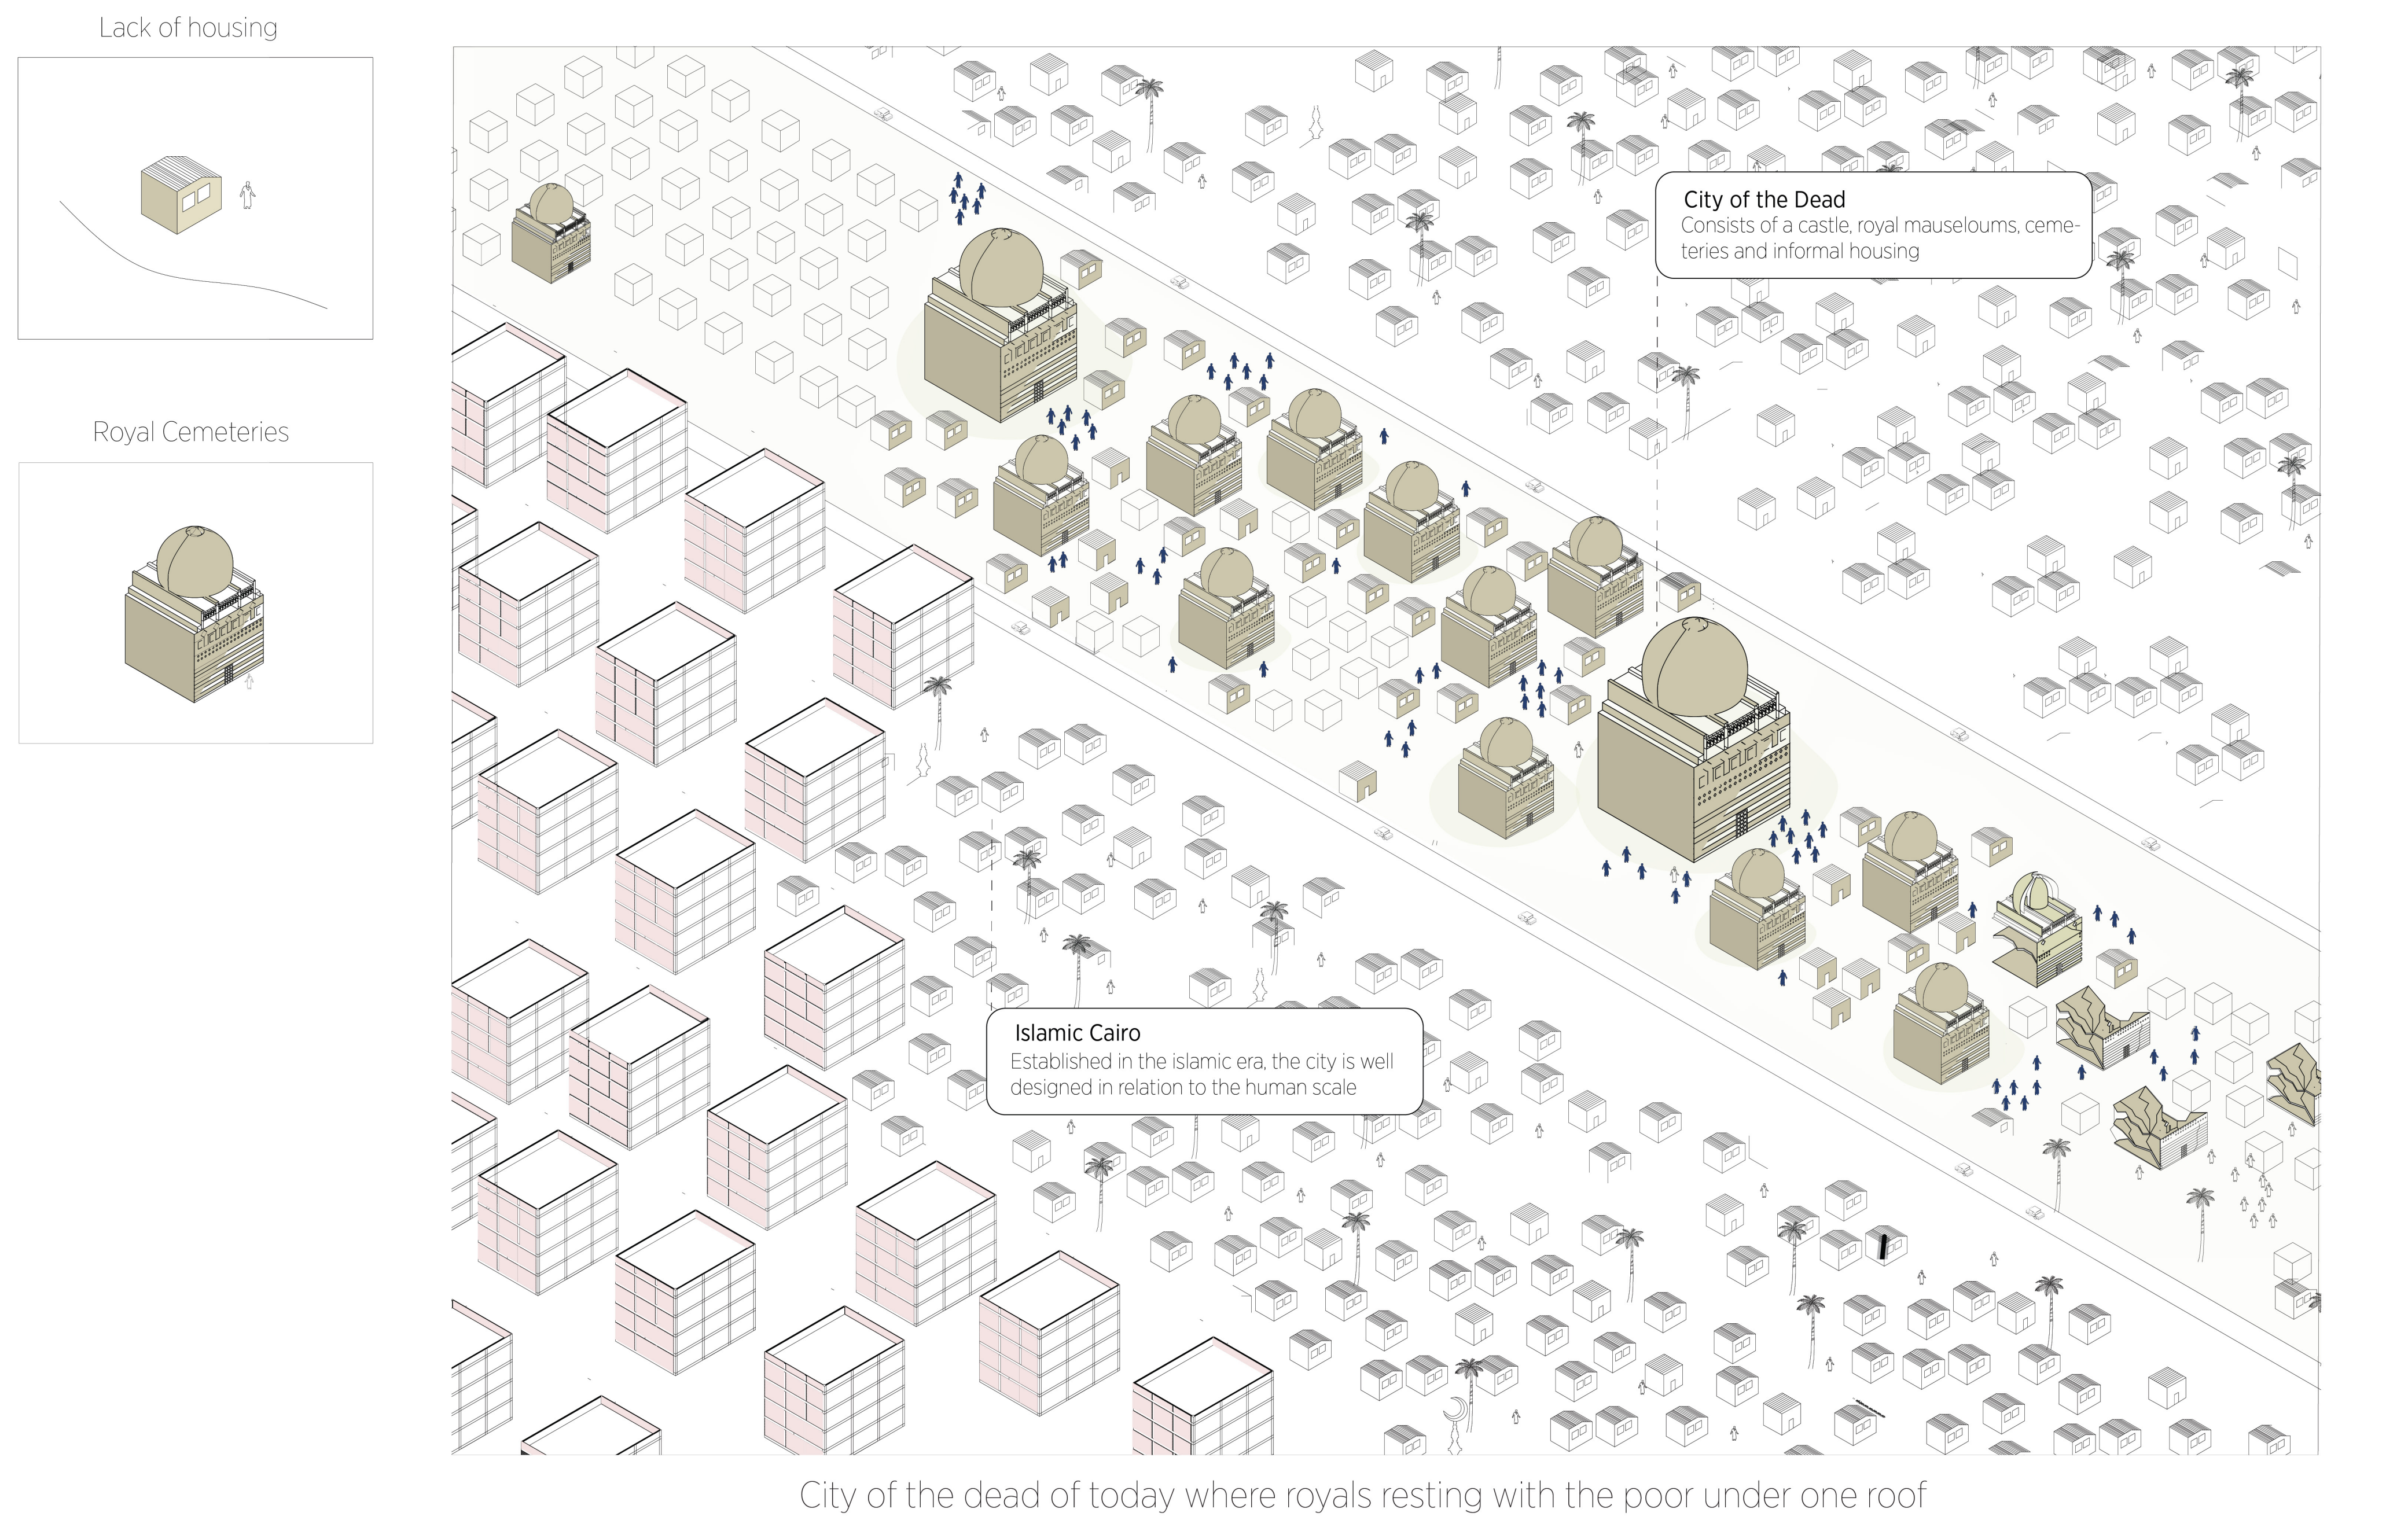

Ayubids (Kurds) took over during 1171-1250 - destoyment of royal cemeteries for fatimids, building a castle to show power

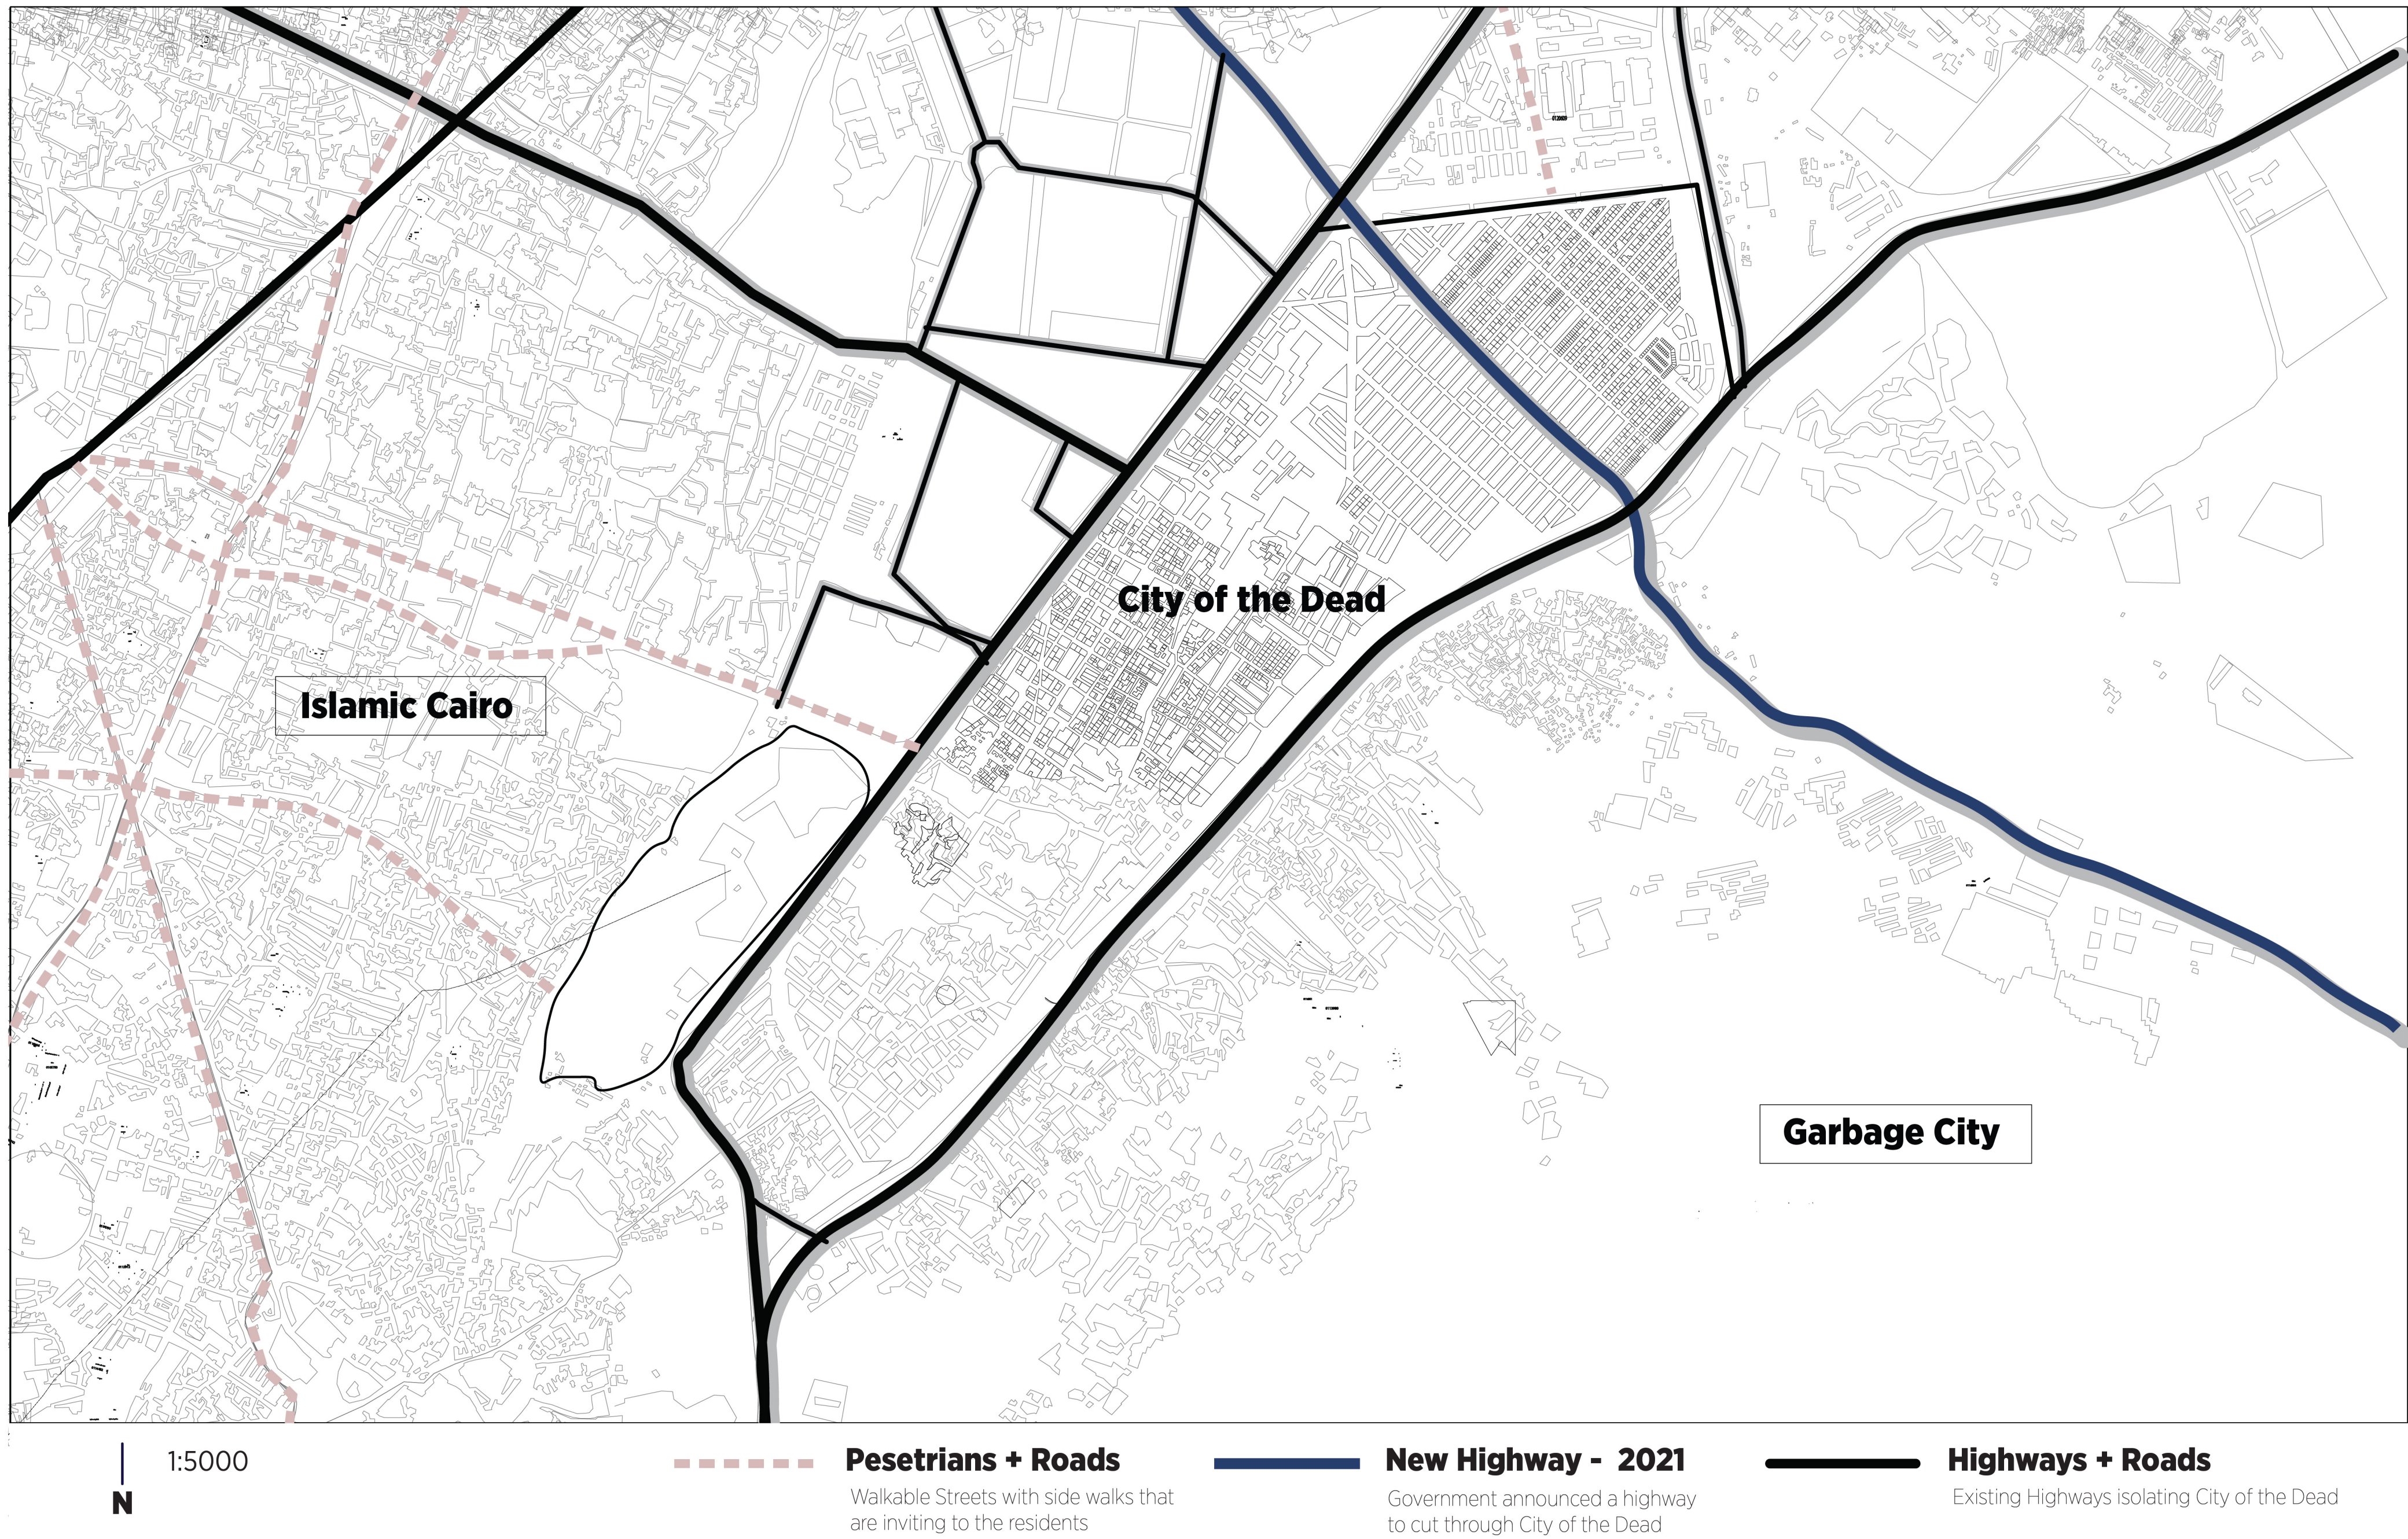

from 14th-20th century, era of plague and different political powers shifted the cemeteries from 'southern or 'old' cemetery to new north-ern area of the castle.

Understanding History - Political Landscape + Showing Power + Mass imigrations shaped City of the Dead

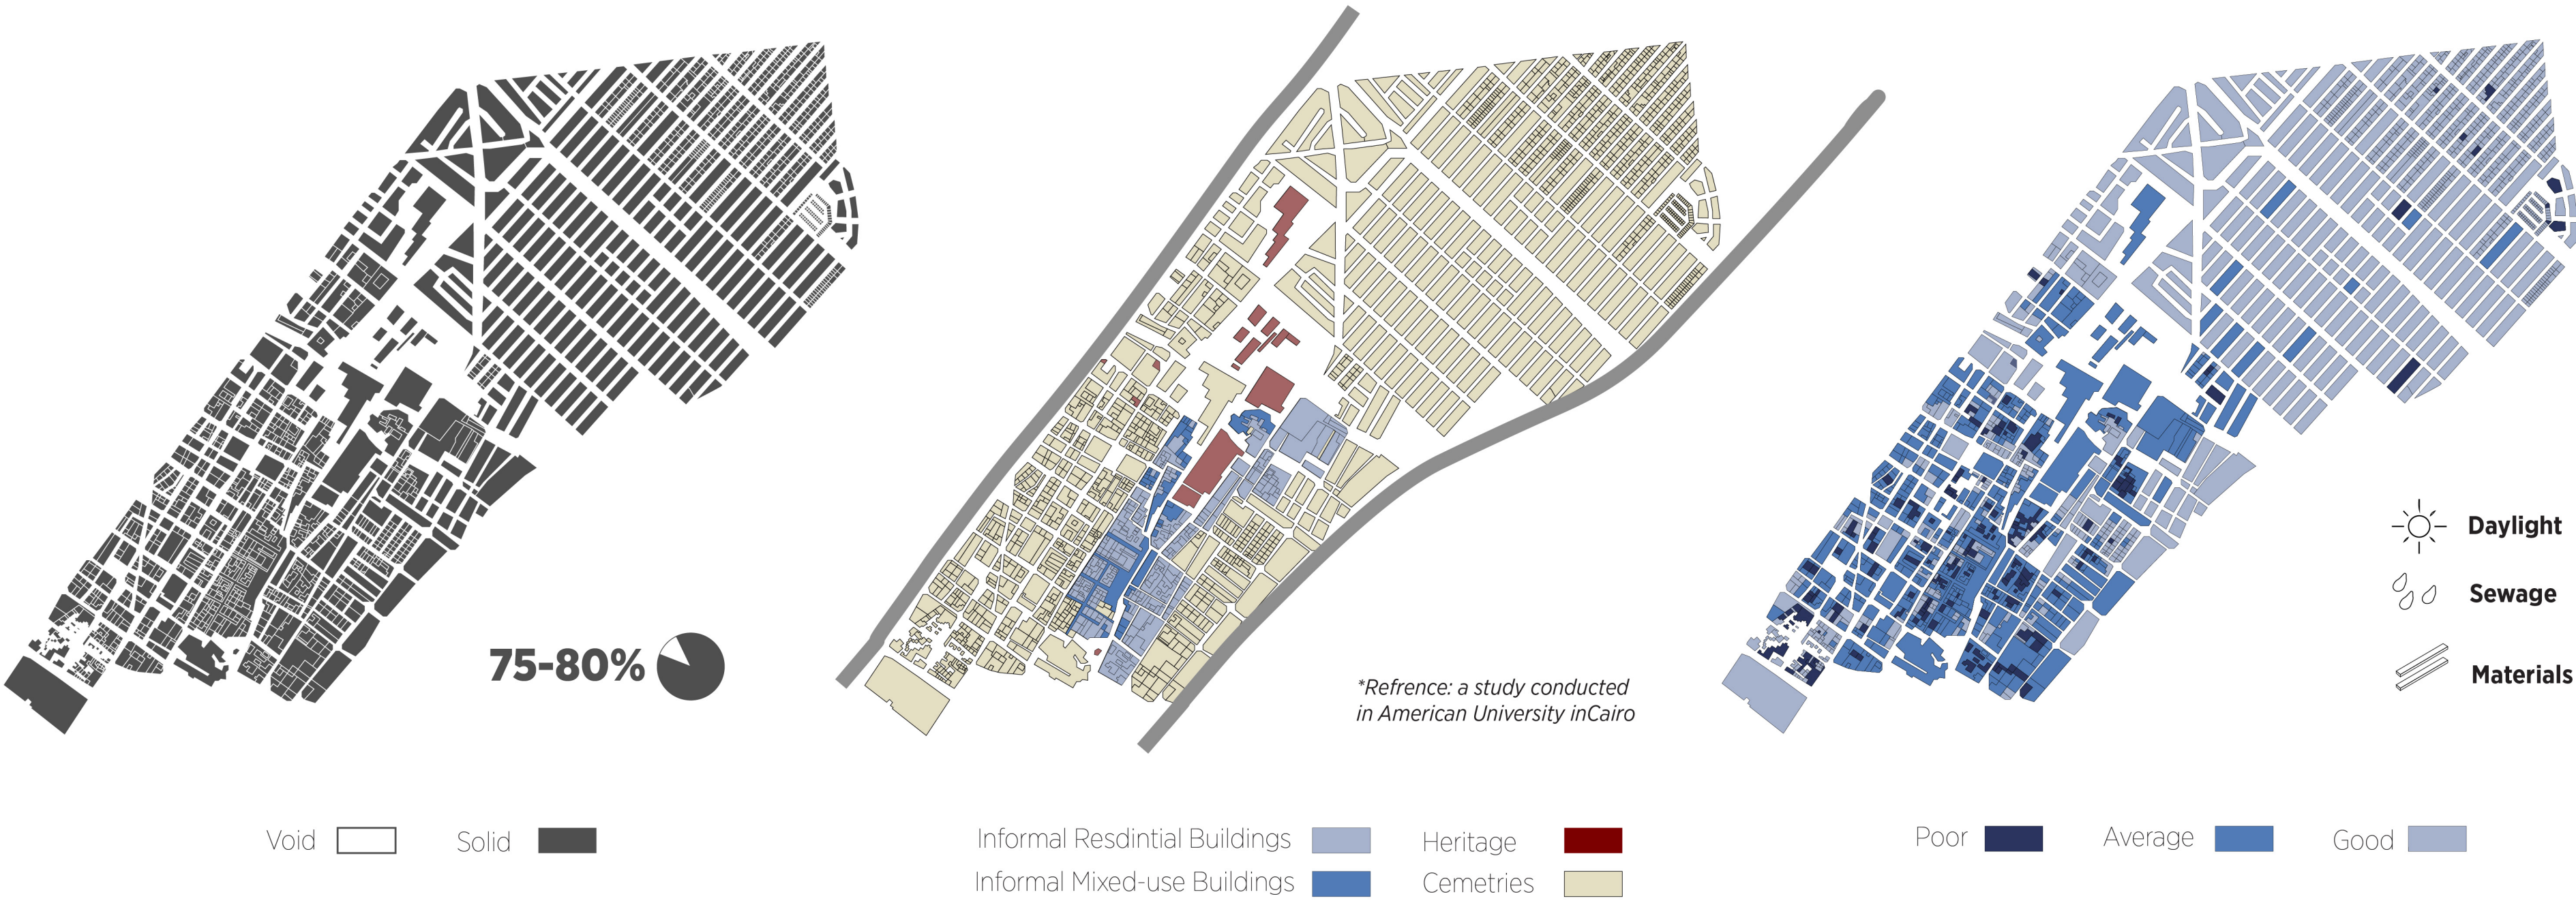

Large Scale Urban Analysis

Current Situation Analysis - A clear edge/blank paper in the middle of the metropolis

Middle Scale Analysis - Understanding urban fabric

Solid + Void

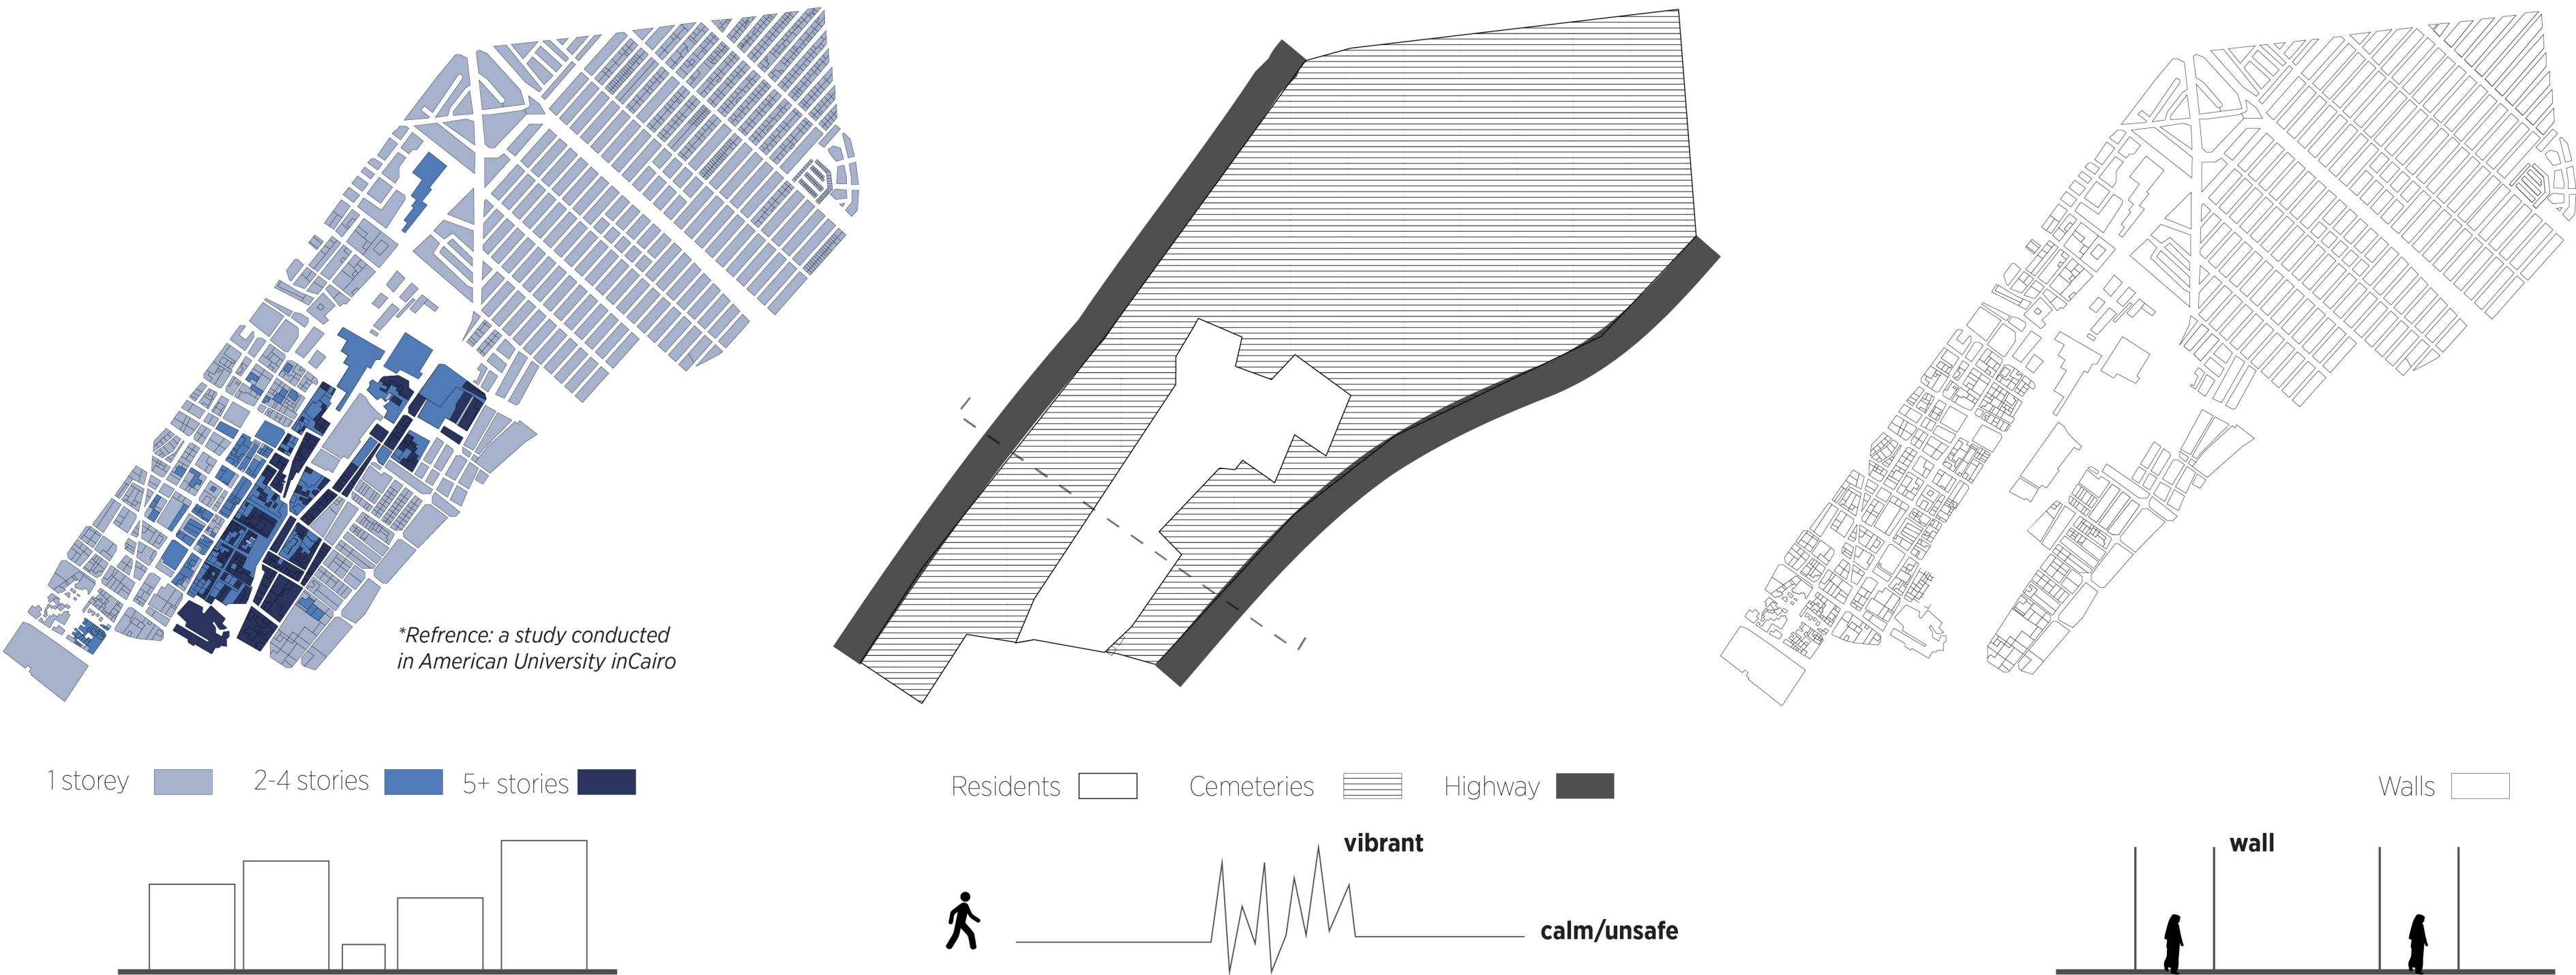

solid occupies 75-80 of the land which makes it so hard for the locals to interact and socialize

Type of Buildings

Mainly the city is shaped by cemeteries and the heart/core area of the informal housing

Buildings Condition

Conditions are based on the quality of buildings, access to sewage, sunlight, quality of materials and connectivity

Building Heights

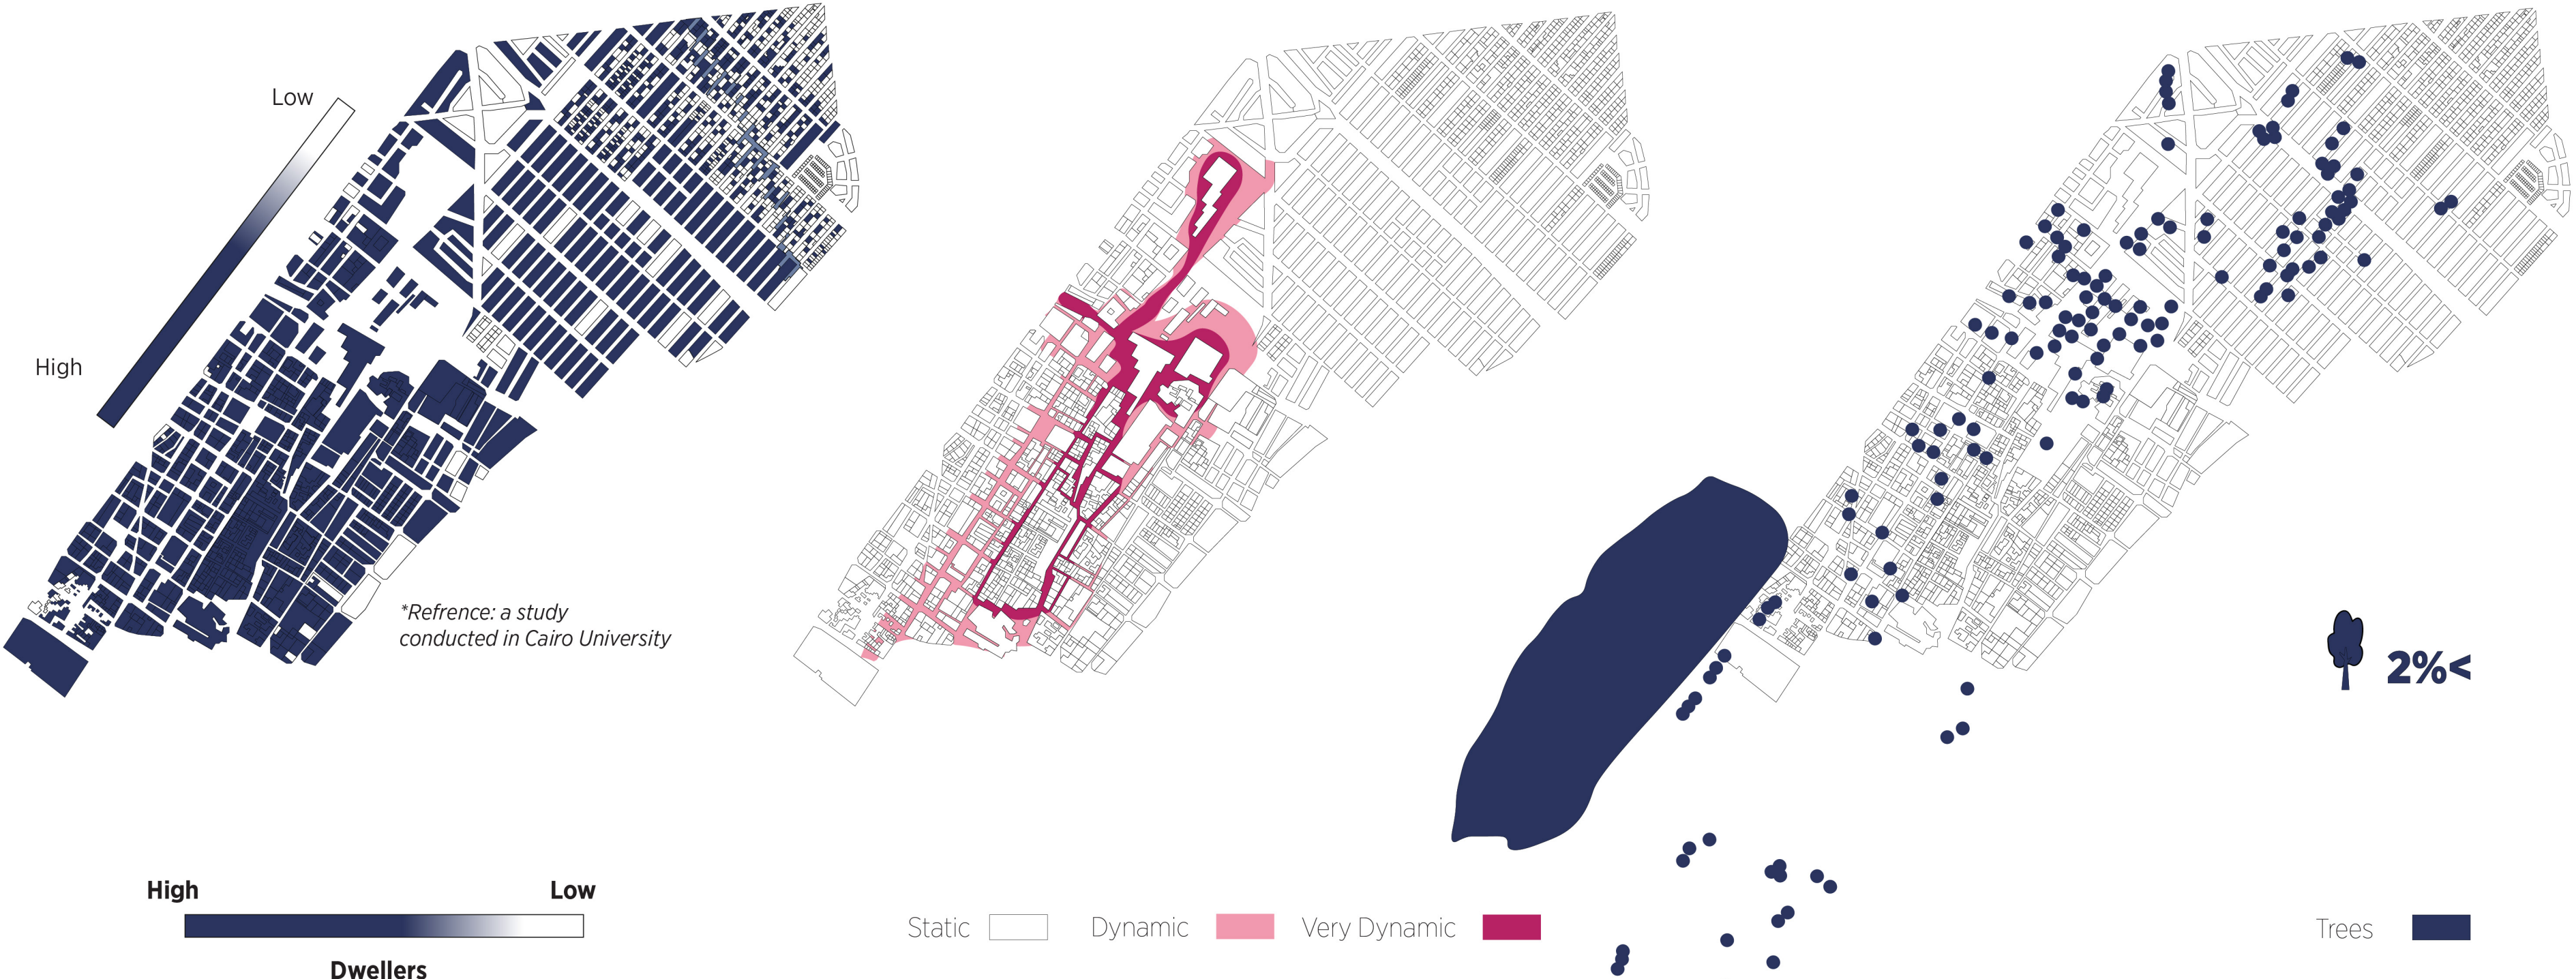

Lack of system in building heights which makes it hard for the daylight in some areas

Phsycological Barriers

The core is the most vibrant; however, near the cemeteries, it is unsafe or calm with no one outside

Physical Barriers

This map illustrates the human scale in relation to the city which full of walls of the cemeteries

Occupied Cemeteries + Buildings

Cemeteries that squatters moved to and formed their own way of living

Dynamic Areas + Public Spaces

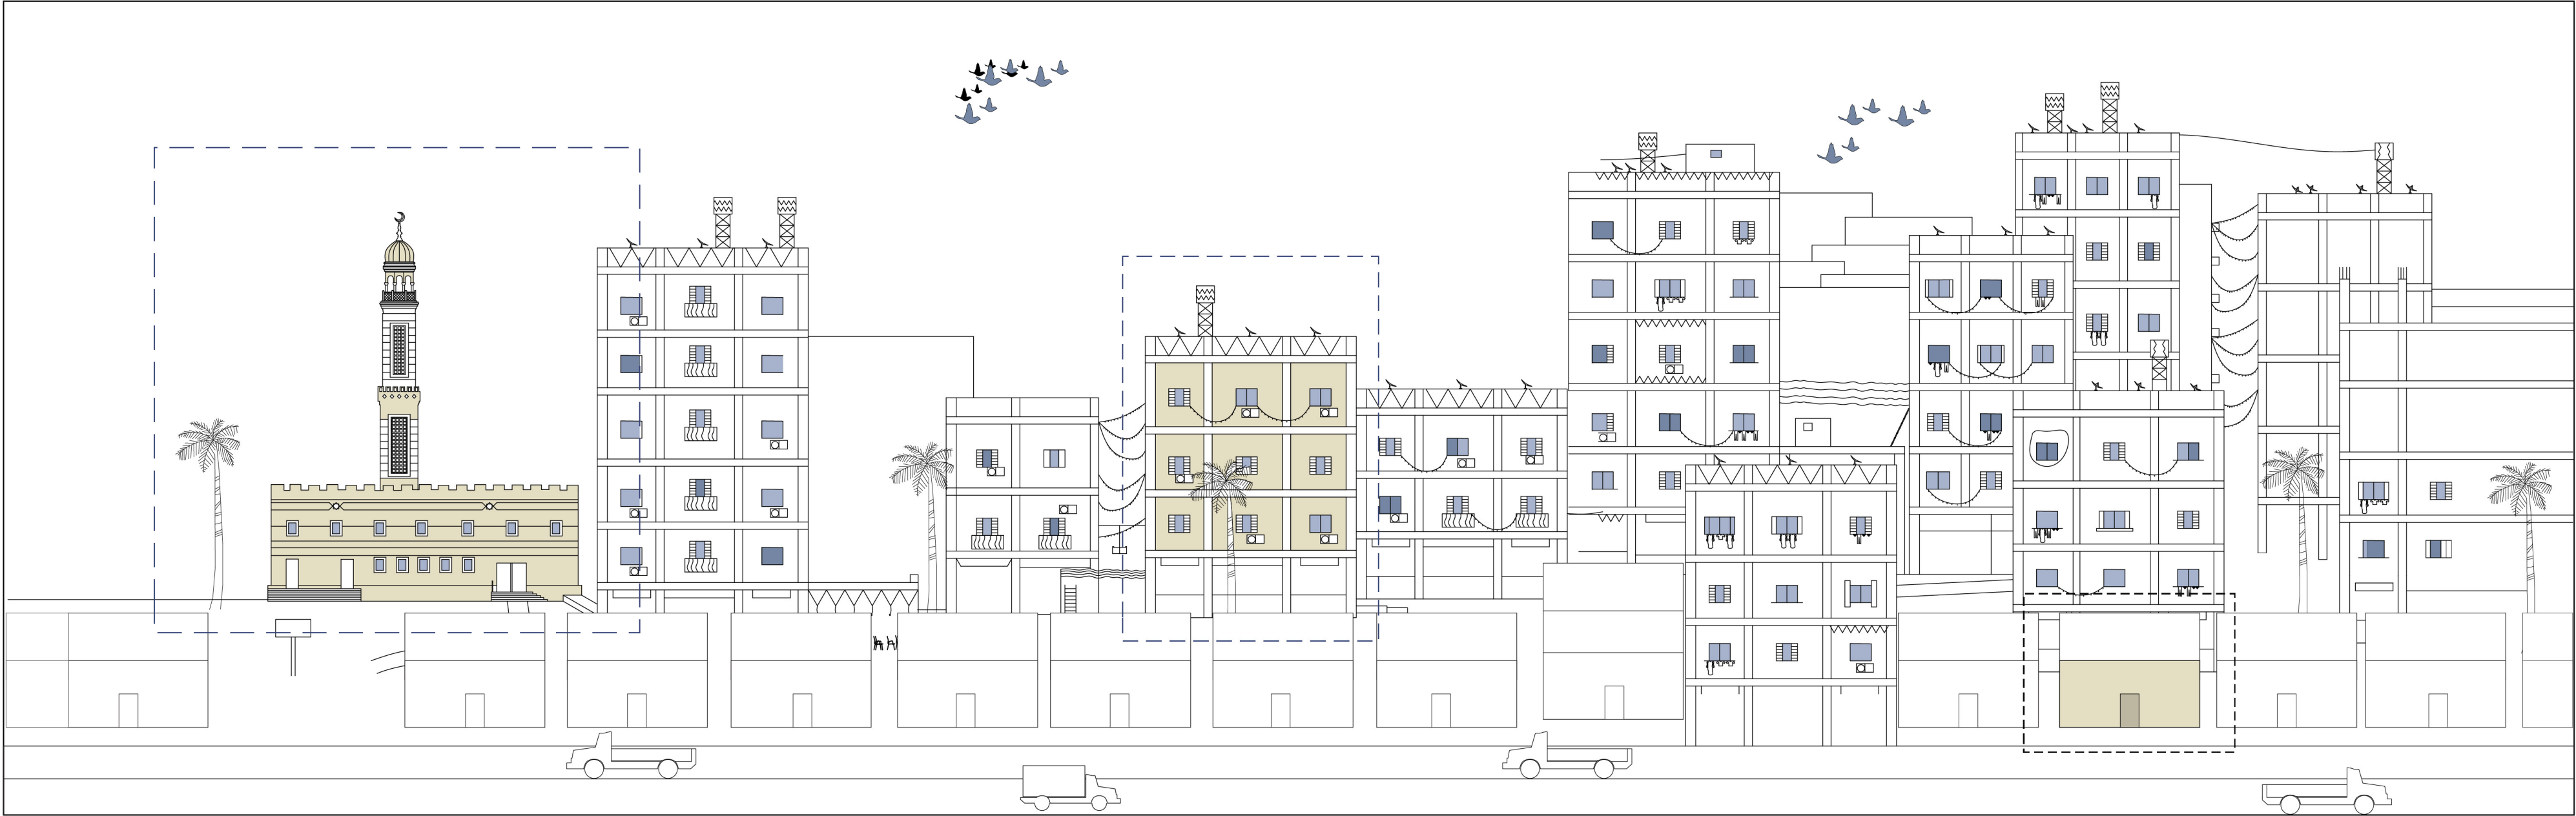

Vibrant areas mainly exist in the core and next to the mosque and markets

Green Infrastructure

Lack of greenery is one of the biggest challenges in the area with no room to plant new trees

Small Scale - Architectural Elements - What is there?

General Appearance

Mosques - Heritage

Plenty of historical mosques exist in the area

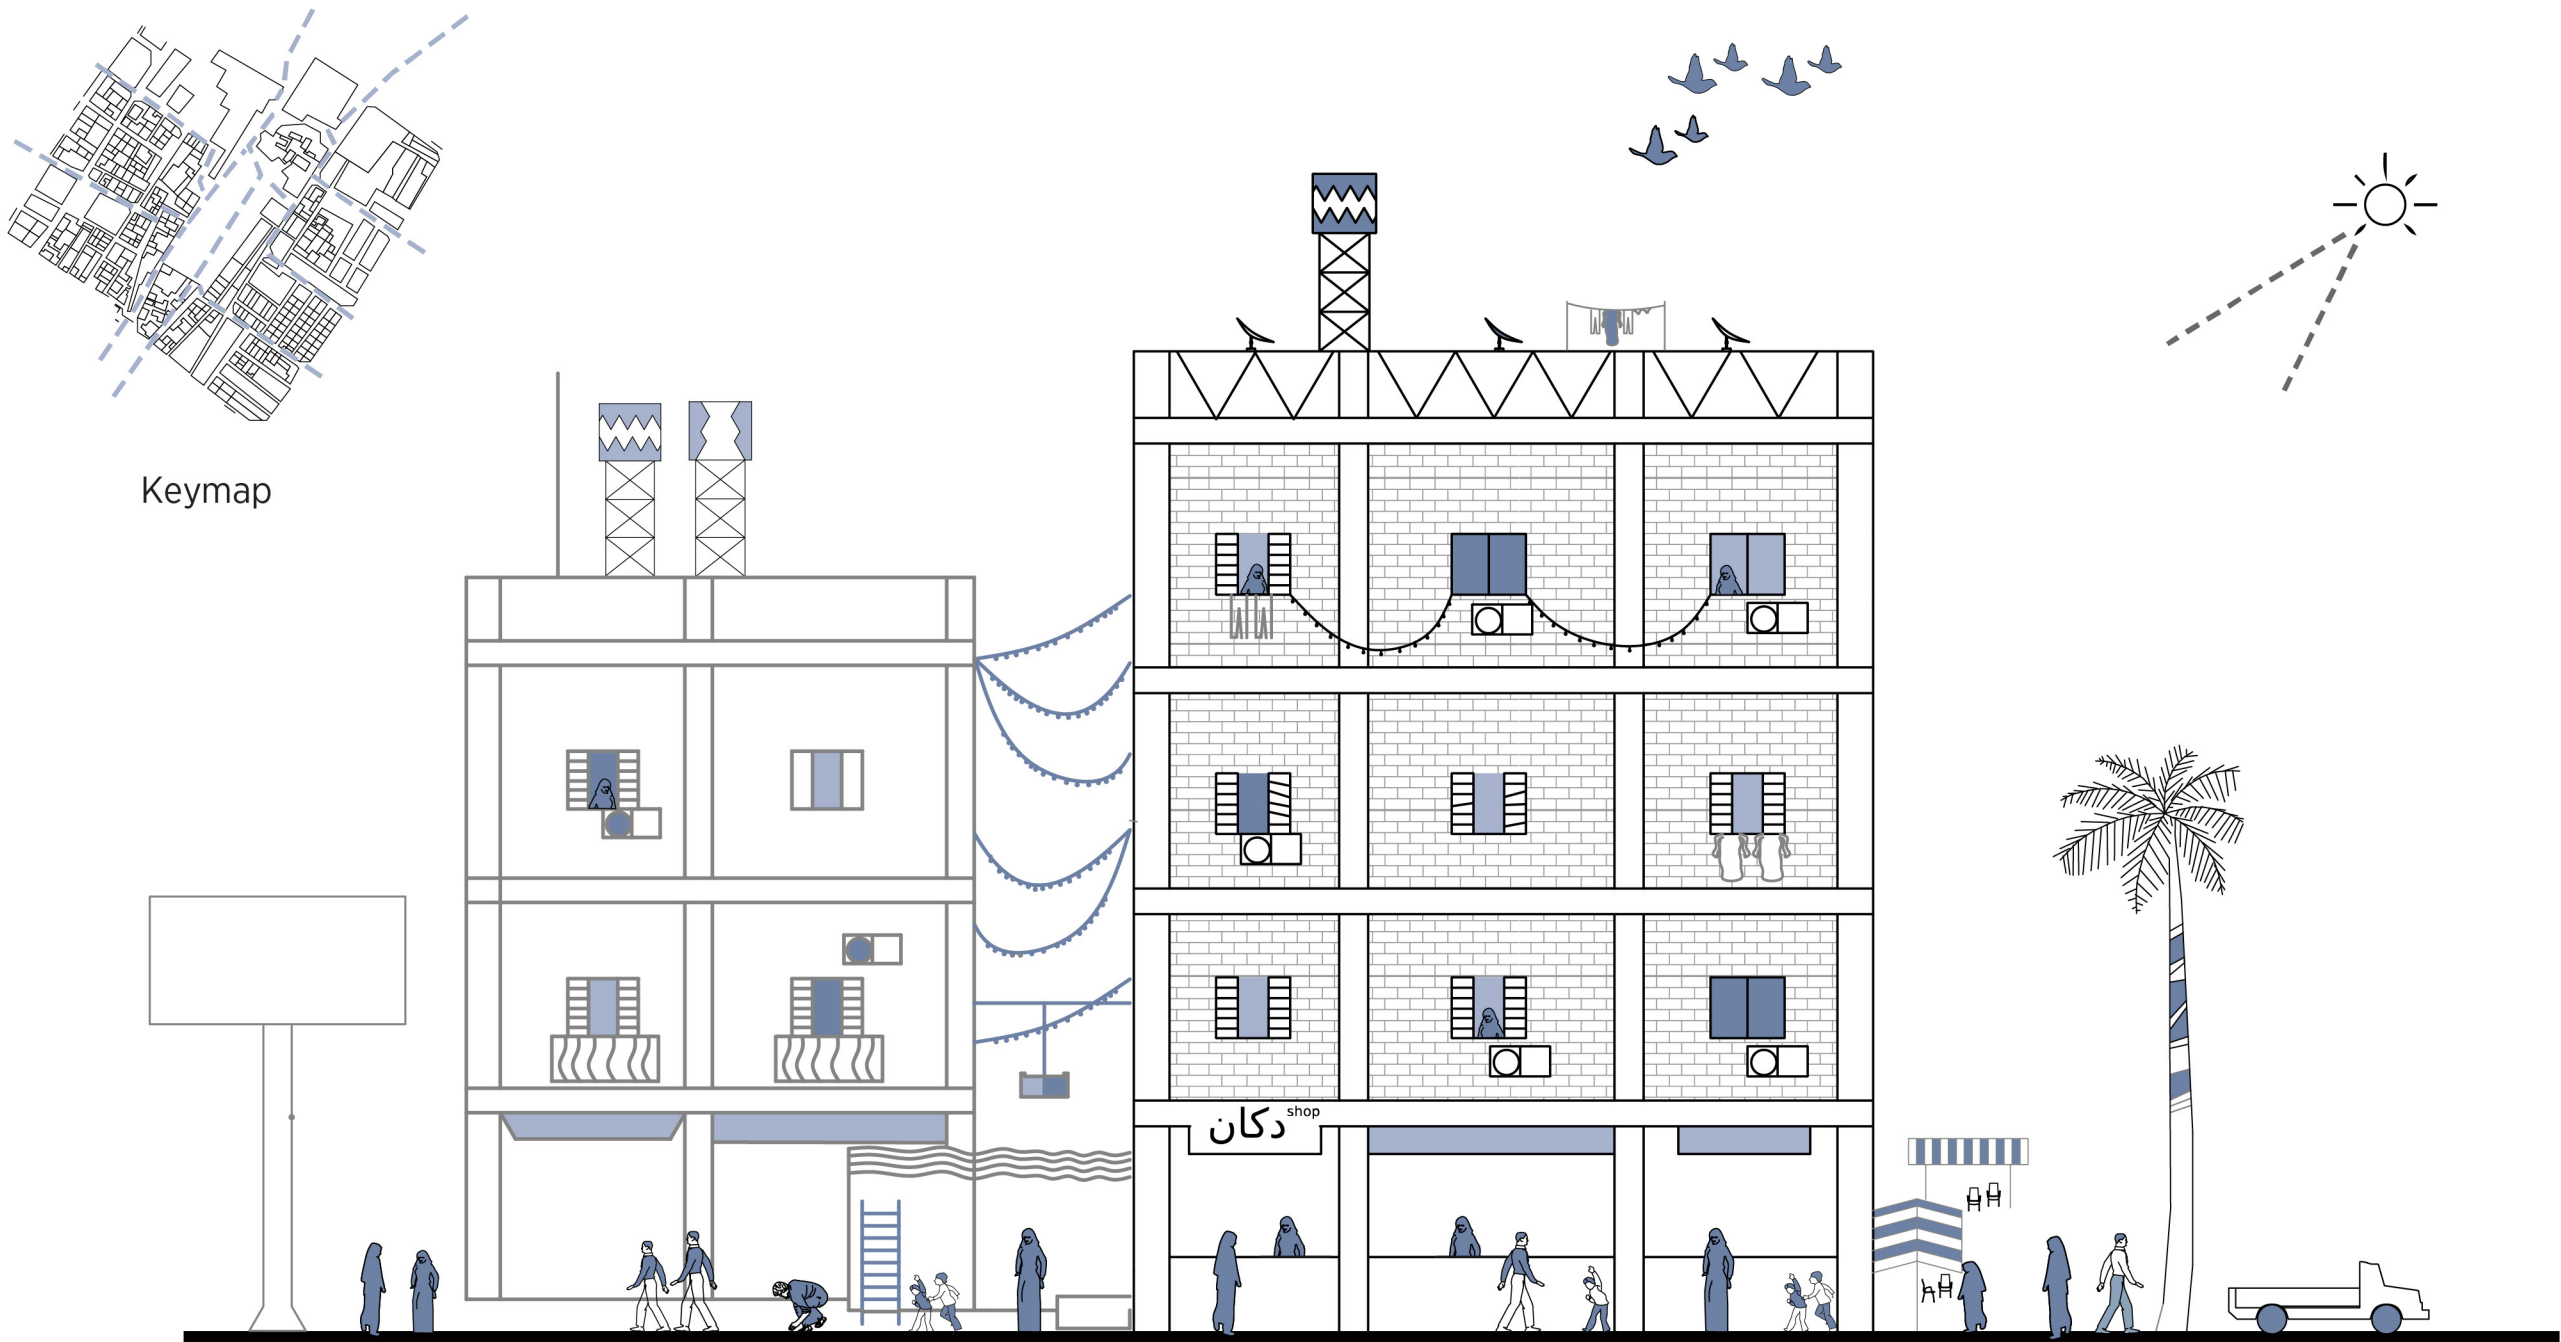

Informal Residential Buildings

Red bricks and concrete residential buildings

Cemeteries

Cemeteries where squatters are living with the dead

Architectural Elements - Informal Residential Buildings

Who are the people living there? - Interviews Investigating local realities

Mohamed

Lack of sewage system and sanitation problems and lack of services in general as schools, etc.

Mohamed: Usually the problems here are related to sewage systems and access to clean water. Also, there is a problem with sanitation in the whole area.

Youssef

50%

Are you upset? you dont have a place to play?

Youssef: There is no play to play football, we play on the asphalt sometimes, and I get injured because of it. I want to play with my friends and have a place to play. We even have our weddings and funerals between the cemeteries

Ahmed

I work in the constructing graveyards, I am content

Ahmed: I have been living here for over 40 years now. I am not scared of the dead they are calm and they don't talk. So I sleep easily and even rest next to them.

Om Ahmed

"We are neither living nor dying, we are something in between"

Om Ahmed: I moved here around 60 years ago. I was very afraid in the beginning, then I got used to it. But this doesn't mean we are living here, but we aren't dead like the dead here, we are something in between.

Khadija

It is unsafe, I cant walk alone at night, I have to take a tuktuk

khadeega: It is not that safe here during the night. There is no anything happening outside. Only people appear in the market and qahwas during the night.

Mina

I wish there is more flow to sell my products. But I don't have a problem here

Mina: We are isolated from the world, sometimes we have tourists, but I wish we can have more flow to sell more and be connected to life a bit!.

Fatma

We are not scared of the dead, we are used to it, they are quiet. But we need life

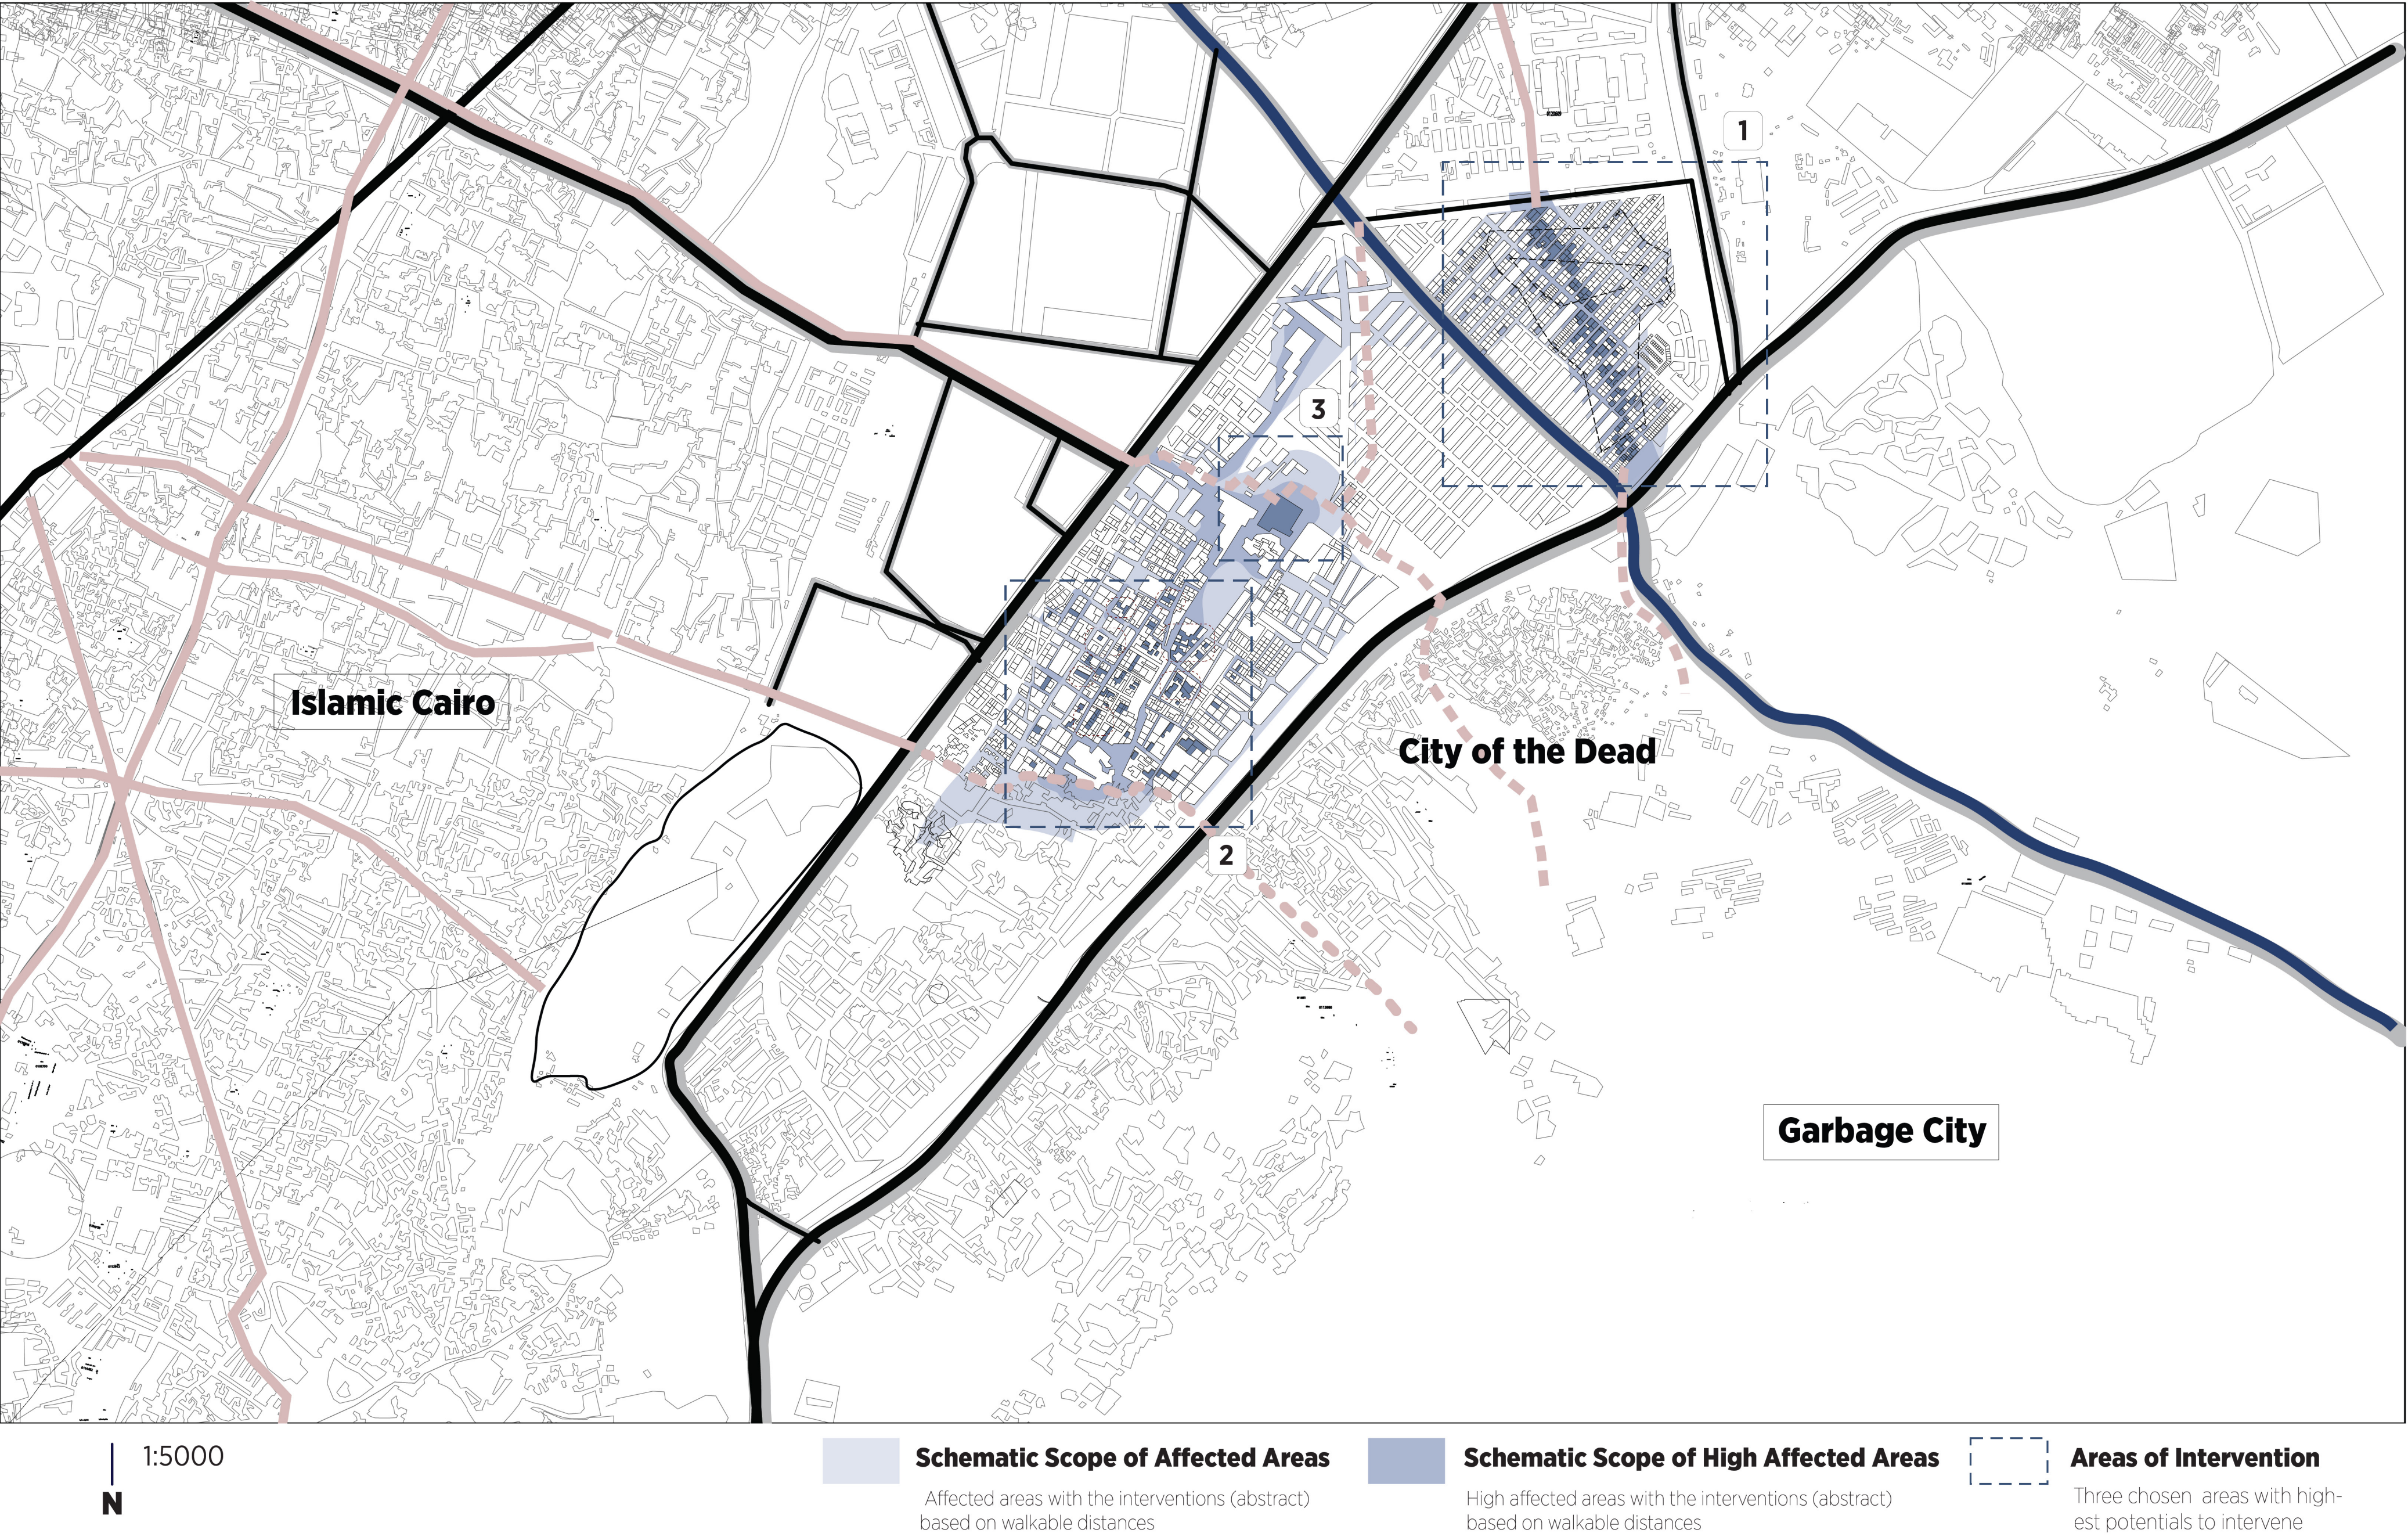

Fatma: Me and my children play and sleep here, we are not scared of the dead-bodies, they are quiet. Even the kids got used to them. But we are tired, very tired we need a better life outside home (cemetery).

The Dead

Am I forgotten? Imaginative question

My family is not visiting me anymore, am I forgotten or maybe not? anyways, I am here with another family.

Potential Areas of Intervention - Stitching the city by connecting adjoining neighborhoods through City of the Dead + Expanding the city's potentials through three pivotal areas

Areas of intervention -Potential Areas

Grid Cemeteries
Reviving urban life

1

Informal Settlements Inner Cores
Prevention of massive urban cores
Infrastructure and sewage enhancement
Creating breathing pockets

2

Adaptive Reuse of Mosques
The existing mosques do not serve the place as it used to do, so why not re-establish the old services in the mosque?

Overview

Author: Reuters

City of the Dead, also known as the ‘Eastern Necropolis,’ stretches over 6 kilometers along the eastern bank of the Nile River in Cairo, Egypt. It is a unique enclave characterized by a combination of formal and informal structures, estimated to house around 500,000 inhabitants. Divided into the northern and (old) southern areas, this vast expanse encompasses a multitude of Islamic cemeteries, mausoleums, and makeshift residential edifices. The informal dwellings, constructed haphazardly within the city, feature red brick and concrete slabs.

The origins of the City of the Dead can be traced back to the construction of a mausoleum honoring the renowned Islamic scholar Imam Al-Shafi’i following his passing in the 7th century. Situated on the outskirts of Cairo, in the desert, this mausoleum was deliberately located away from the city itself. At that time, the inhabitants of Cairo would visit the mausoleum to pay homage to Al-Shafi’i, in accordance with Islamic beliefs surrounding the afterlife. Subsequently, during the 10th to 12th centuries, the Fatimid dynasty conquered Egypt and designated Cairo as the capital of the country. They also erected mausoleums and cemeteries within the City of the Dead for prayer and remembrance. Later, the Ayyubids, a Kurdish dynasty, assumed power in Egypt, demolishing some of the royal cemeteries established by the Fatimids while constructing a Citadel in City of the Dead.

Throughout the 14th to 20th centuries, marked by periods of plague and shifting political forces, such as French colonization, new cemeteries were mandated to be constructed in the northern or ‘new’ area of the citadel, displacing the focus from the southern or ‘old’ area. In recent history, City of the Dead has become a refuge for individuals facing severe housing shortages and seeking opportunities. Forced by circumstances, these citizens have resorted to cohabiting with the deceased within the cemetery grounds, erecting informal residential structures in vacant spaces. These makeshift rooms serve as places to live, work, and even sleep in close proximity to the deceased.

Architectural Elements

Three primary architectural components define the City of the Dead. The initial illustration pertains to the cemetery, which has been occupied by the homeless and individuals in search of improved prospects. An examination and depiction of various cemeteries were carried out during the site visit. In Cairo, cemeteries are typically built in a distinctive manner, featuring a compact area enclosed by four walls to provide privacy. These spaces incorporate a hospitable section, burial grounds, and a few plant arrangements.

Cemeteries

On the site, there are two distinct types of residential housing. The first type is represented by the building depicted in the image, which used to accommodate workers and constructors involved in the construction of mausoleums and cemeteries, as well as other locals. The second type consists of informal residential buildings, which were thoroughly examined in panels composed of red bricks and concrete slabs. These informal structures can either be mixed-use or purely residential. However, they typically suffer from inadequate infrastructure and face challenges related to accessibility and sanitation.

Residential

The third category corresponds to the mausoleum, which serves as a distinctive marker indicating the burial of a renowned figure within its walls. The fourth element is represented by the mosque, a place where people used to gather for prayers and engage in Quranic teachings and Islamic classes, known as ‘Kuttab.’ The City of the Dead is the final resting place for numerous royals, kings, former prime ministers, and ministers. It is a complex neighborhood characterized by a diverse range of architectural styles, where the deceased and the living coexist in a single location.

Mausoleum

Challenges

Lack of public spaces

how to make public spaces within the cemeteries while at the same time respecting the rituals and the values of the dead? This challenge can be related as well to the lack of accessibility.

Author: Asmaa Waguih

Insufficient work and study environments

City of the Dead faces significant challenges concerning employment and education for its residents. The lack of adequate spaces and the informal nature of neighborhood-scale planning and design are among the primary reasons contributing to these issues.

Author: Tamara Abdul Hadi

Lack of accessibility

How to connect city of the dead to the surrounding areas by removing the phsycological borders of the cemeteries. How to turn cemeteries into livable dynamic area for strangers and locals. How to Increase the flow of people?

Preserving the rituals

How can the design of public spaces in cemeteries strike a balance between preserving the rituals and values of the deceased and enhancing accessibility, considering the current challenges?

Demolishments of all unsafe/unplanned settlements

Is the demolition and relocation of residents from the affected houses the appropriate solution to address the problems associated with informal settlements?

Mobility of Individuals

How can we effectively convert cemeteries into thriving, habitable environments that cater to the needs of both local residents and visitors? Lastly, how can we improve the movement and mobility of individuals within these areas?

Project aim

embracing death and life

Taking care of the local community while respecting the dead

The project focuses on developing three key aspects. Firstly, it aims to eliminate the psychological barriers of cemeteries and transform them into livable spaces where the deceased and the living can coexist. This involves preserving and respecting the rituals of the deceased by maintaining a serene atmosphere in certain areas, while also creating dynamic spaces that encourage interaction for the living. Where places can intervene and design public spaces in the northern area specifically for the local community (cemetery dwellers). These spaces should allow for children to play respectfully near the deceased, while also facilitating social interaction among people.

Secondly, the project aims to improve the overall quality of infrastructure and public spaces within informal residential areas, with a particular focus on enhancing the neighboring buildings distribution. Currently, these concrete blocks lack properly designed spaces that cater to the needs of the local community.

Lastly, the project aims to utilize identify and design areas within the area where the locals can work and access various services such as schools and healthcare centers. Additionally, it aims to create well-designed multifunctional spaces and diverse types of markets.

Every challenge tackles a certain SDG.

However, I believe all the goals are overlapped in the end

Insufficient work + study environments

DECENT WORK AND ECONOMIC GROWTH

Introducing new places or adaptive reusing old buildings to study/work.

Accessibility + Infrastructure enhancement

NO POVERTY

City of the Dead has a lot of lost potentials. Starting from the 21 historical monuments presence in the site to the royal and other cemeteries. By connecting the neighborhood and make it accessible, the flow of people will increase which will help the locals to gain value from this flow.

Public spaces

SUSTAINABLE CITIES AND COMMUNITIES

Social interaction within the cemeteries remain a huge obstacle, specially at night. By dedesigning a decent place to interact it will enhance the sense of community in the area.
