STEP 3: HOUSING

AVG SIZE HOUSE: 30 m²

ECONOMIC ACTIVITIES: possible location

TYPOLOGY 1: Possible evolution

TYPOLOGY 2: Possible evolution

SERVICES (sewage, running water, electricity)

Typology 1: Possible evolution

Typology 2: Possible evolution

The houses were designed to accommodate different activities in different areas. A house that can be adapted by its owner's needs and wishes, in terms of space, but also of materiality. A house where they can develop their own businesses and improve their economic status. Families related to activities related to the river, such as fishing and otter hunting, can be closer to the water. So that their boats can rest close to home and the transportation of the animals to the place where they are cleaned, is shorter. Families living close to street connections or towards the parks could have more chance to open stores.

The house average size is 30 sqm. Houses are usually constituted by a kitchen as the heart of the house and one bedroom. Many of the houses have bathroom. Mostly separate from the house. There is no sewage connection, so some of them have septic tanks, and many of them have just a pipe to the river.

Possible activities:

- Material collector
- Clothes store and workshop
- Fisherman

The houses lassen been connected to the river to accommodate possible activities related to commerce, education and community center, etc.
