The concept of dynamic space, its origins rooted in virtual environments, has slowly begun to filter into the physical realm.

Every formal and conceptual trend is trying to be at the service of replacing the cultural-intellectual values to be combined with the method of the new life by using technologies and elements of the age of digital...
Social aspects of everyday technology

In today's society, the different uses of work, education, and entertainment carry the same role, and the public and private spaces are no longer strictly separated. Instead, the interaction is more fluid.

The social aspects of everyday technology are reflected in the design and planning of the urban environment. The role of the central core in the design of commercial and office buildings is reminiscent of ancient courtyards.
